## FACSIMILE TRANSMITTAL SHEET

TO:	Marianne Ledda	FROM:	Rafael Villa
COMPANY:	SAIC	DATE:	MAR 21, 2006
FAX NUMBER:	(510) 446-7919	TOTAL NO. OF PAGES INCLUDING COVER:	44
PHONE NUMBER:	(510) 466-7154	RE:	Public Records Requests

☐ URGENT ☒ FOR REVIEW ☐ PLEASE COMMENT ☒ PLEASE REPLY ☐ PLEASE RECYCLE

Marianne, here ARE the EQL's. Keep in mind that ALL OLDER "inactive" files might or might not be available, depending on the age. Also, cancelled Applications (which were never permitted) are usually destroyed. There were no records found @ "12631" Los Nietos and no equip list @ "12310" Slawson. Feel free to call me with any questions.

Rafael  
(909) 396-2049

If you have questions or trouble receiving this fax, please call (909) 396-2049

MAR 21 '06 01:57PM PUBLIC RECORDS UNIT

Report:

On December 9, 2004, I arrived at 12:45 PM when I met Mr. Mike Mena, Plant Supervisor, and Mr. Raul Hernandez, Maintenance Supervisor, for an annual inspection. The facility blends and packages lubricants. The packaging lines in their blending building and distribution warehouse are exempt from permitting under Rule 219(m)(7). Their permitted Batch Blending and Melting System melts and mixes a solid waxy additive in the lubricating oil. It is vented to an Aercology Model No. E-500 Oil Mist Eliminator. They maintain production records showing that they blend one batch per day, in compliance with their four batches per day permit limit. They also maintain required mist collector inspection and maintenance records.

The facility has a Sellers boiler, Model No. 60 HP-SH-LN390, S/N 100583, rated at 2,511,000 Btu/hr. Tune-ups are performed by S&R Boilers Inc. The boiler passed the most recent source test conducted by AirKinetics Inc. on February 6, 2004. The Equipment List shows two active boiler permits (Nos. F62971 and FF62970); however, the facility only has one boiler. Tank Nos. A through G in the packaging area, the 31 tanks on the east side of the blending building, and the six new tanks on the north side of the blending building are all exempt from permitting under Rule 219(m)(7).

The facility uses Adhesive Products Inc. hot melt adhesive with zero VOC to form boxes for shipping lubricating oil containers. In their distribution warehouse, they apply Adhesive Products Inc. 1003 Liquid "Fast Break" Glue to the top exterior of lubricating oil shipping boxes. This material provides slight adhesion to allow boxes to remain stacked during transport. It is Rule 1168(c) compliant. The facility also has a small emergency generator on the east side of the distribution warehouse that provides emergency power to their warehouse air exhaust system. It is powered by a Cummins inline 4-cylinder diesel engine. The current hour meter reading is 45.1 hours. This engine is exempt from permitting under Rule 219(b)(1).

No Notices were issued.

### Report:

On January 18, 2005, I arrived at 10:40 AM when I met Mr. Wayne Fariester, V.P. of Operations, and Mr. Tom Snyder, Asst. Shop Manager, for an annual inspection. This facility is a warehouse and distribution center for Budweiser. They have a Gasboy Model No. 9153AXTW1CX gasoline dispenser with two OPW-11VF nozzles. Phase I and Phase II equipment was Rule 461(c) compliant except that the gasoline tank spill box contained rainwater. Mr. Snyder cleaned out the rainwater prior to the conclusion of my inspection. The facility passed the two most recent reverification tests performed by Pacific Systems Electric on December 1, 2004 and by Orange County Tank Testing on December 4, 2003.

The facility has an underground diesel storage tank and three diesel dispensers that are exempt from permitting under Rules 219(m)(4) and 219(m)(3), respectively. They also have a 499 gallon propane tank that is exempt from permitting under Rule 219(m)(2).

No Notices were issued.

Report: Pacific Truck Equipment is a large aftermarket converter of truck chassis' to custom utility work trucks. The have not been issued their final Title V facility Permit to Operate although they have submitted their application.

March 10, 2005, 1635-1745 hours:

I conducted an inspection at Pacific Truck Equipment in response to Complaint # 174499 which alleged the facility to be the facility responsible or one of the facilities responsible for overspray on their car. I met Dennis Wilson, Facility Manager for an annual facility inspection. Although Mr. Wilson's business card has his title as "Salesman" his actual title is Facility Manager for practical purposes. Mr. Wilson escorted me for the inspection. The facility has two large spray booths; the booth permitted by PTO # F 68668 is dedicated to applying primers and the booth permitted by PTO # F 68667 is dedicated to applying the topcoat. Neither one of the Paint Spray Booths (PSBs) were in operation during my inspection although both booths contained vehicles prepped for spray painting. The filters in both booths looked to be in good condition with no tears, holes or any type of damage and correctly installed. All VOC records were available for review upon my request. The facility is in compliance with their facility permit and AQMD Rule 1107, 1151, 109 & 206.

Before leaving the facility, I informed Mr. Wilson about the overspray complaint alleging his facility as the possible source and I asked for a sample of the white paint used in painting the trucks.

Report: Date: 08/30/2005, Time: 0935.

I met with Mr. Paul Watts, the owner of The Finishing Co.

The two spray booths were in good condition and all exhaust filters were in place. The differential pressure gauges were operational.

The facility uses acetone to clean the spray gun. Mr. Watts showed me Frazee White Satin Lacquer and White Lacquer Undercoat with VOC content of 275 g/L. that they use. He said they add acetone to the materials before spraying them.

The facility had all daily operation logs and it calculated the amount of VOC emitted to the atmosphere daily. They sprayed about one gallon of Frazee products per day.

Report 12-7-2005

1400 PM - Arrived at site and met with Ed Foss and Carol McCaken. They have shut down their facility and stopped plating 1 1/2 months ago. All tanks have been drained and disconnected and the rectifiers are in storage across the street pending sale. They have 1400 gallons of hexavalent chromium solution (2 to 6 %) in poly drums that they will have picked up. Last measured surface tension values were from 34-35 dynes/cm. Last recorded ampere hour reading for chrome plating tank on 10/14/05 was 1,087,040 hours, brite nickel tank was 2,618,723 hours, and semi brite nickel tank was 4,376,908 hours. In 2005 they used 645,509 ampere hours of current in chrome tank, 2,247,691 ampere hours of current in brite nickel tank, and 3,347,836 ampere hours of current in semi brite nickel tank. No usage limits on permits. Owners said that DTSC drilled soil borings at their facility and found ample nickel and chromium contamination in the soil. They decided to sell the property while market is good to pay for clean up and still have some left over for themselves.

**Report:**

Met with Vice President/Owner, Mr. Edward Foss. Facility used to generate electricity using a co-generation system. Facility no longer has co-generation system. Mr. Foss says that the system has been gone for 4 to 5 years. The permit to operate the co-generation system was issued to Train Johnson, which is the company that supplied the equipment to Foss Plating Company. Therefore, Train Johnson is Out of Business at the above location address.
